

# PLASTIC PIPE SEALS

VIP-Polymers is a major provider of seals used in PVC for both drinking water and dirty-water applications. Our products are also used in jointing polypropylene and, in some instances, polyethylene pipes.

## Pressure pipe for potable water

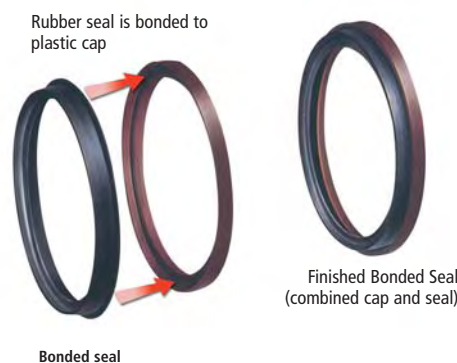

We make seals to customers' specific requirements including locked-in seals incorporating our proprietary **Viploc™** design. This features a locking ring which holds the seal in a groove within the pipe.

Pressure pipe for potable water

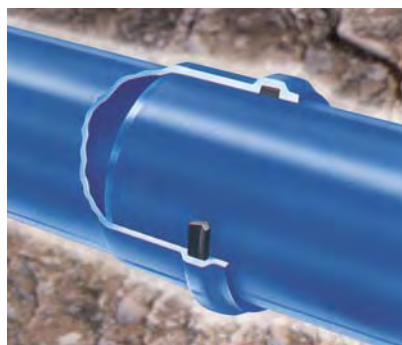

## Bonded seal

At VIP-Polymers, we have developed a unique method for bonding elastomeric seals to thermoplastics. The result is a system which greatly facilitates the fitting of the seal to the pipe or connector.

## Non-pressure pipe

For sewerage, drainage and industrial applications - We can manufacture to your particular specification; we offer our own **Vipseal™** proprietary seal for push-fit joints.

Non-pressure pipe for sewerage, drainage and industrial applications
